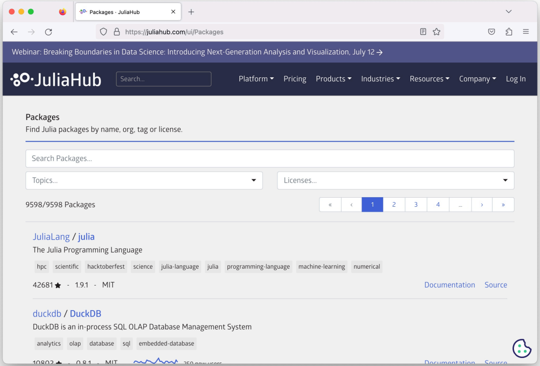
Getting started

Packages

Packages

Visual interface for exploring the packages:

Julia hub `https://juliahub.com/ui/Packages`



Alternative:

Julia Packages https://juliapackages.com/

Packages

A selection of useful packages:

Base library:

`Pkg`	primitives for managing packages
`Random`	primitives for random number
`LinearAlgebra`	primitives for linear algebra
`Printf`	primitives for C-like format to display on screen

External library:

`PyPlot`	Plotting for Julia based on matplotlib
`Plots`	a high-level plotting package
`JuMP`	Modeling language for Mathematical Optimization
`GLPK`	interface for GLPK solver
`Gurobi`	interface for Gurobi solver
`CPLEX`	interface for the CPLEX solver
`vOptGeneric`	Multiobjective linear optimization solver; generic problems
`vOptSpecific`	Multiobjective linear optimization solver; specific problems

Packages

A selection of useful packages:

Base library:

`Pkg`	primitives for managing packages
`Random`	primitives for random number
`LinearAlgebra`	primitives for linear algebra
`Printf`	primitives for C-like format to display on screen

External library:

`PyPlot`	Plotting for Julia based on matplotlib
`Plots`	a high-level plotting package

`JuMP`	Modeling language for Mathematical Optimization
`GLPK`	interface for GLPK solver
`Gurobi`	interface for Gurobi solver
`CPLEX`	interface for the CPLEX solver

`vOptGeneric`	Multiobjective linear optimization solver; generic problems
`vOptSpecific`	Multiobjective linear optimization solver; specific problems

Packages

A selection of useful packages:

Base library:

`Random`	primitives for random number
`LinearAlgebra`	primitives for linear algebra
`Printf`	primitives for C-like format to display on screen

External library:

`PyPlot`	Plotting for Julia based on matplotlib
`Plots`	a high-level plotting package
`JuMP`	Modeling language for Mathematical Optimization
`GLPK`	interface for GLPK solver
`Gurobi`	interface for Gurobi solver
`CPLEX`	interface for the CPLEX solver
`vOptGeneric`	Multiobjective linear optimization solver; generic problems
`vOptSpecific`	Multiobjective linear optimization solver; specific problems

Adding a package (from the external library)

Commands to invoque **once** before the first use of the given package:

Method 1:

```
(@v1.9) pkg> add PyPlot
(@v1.9) pkg> add JuMP,GLPK
```

Method 2:

```
julia> using Pkg
julia> Pkg.add("PyPlot")
julia> Pkg.add("JuMP")
julia> Pkg.add("GLPK")
```

Adding a package (from the external library)

Commands to invoque **once** before the first use of the given package:

Method 1:

```
(@v1.9) pkg> add PyPlot
(@v1.9) pkg> add JuMP,GLPK
```

Method 2:

```
julia> using Pkg
julia> Pkg.add("PyPlot")
julia> Pkg.add("JuMP")
julia> Pkg.add("GLPK")
```

Using a package

Commands to invoque **each time** before the first use of the given package:

```
julia> using Pkg
julia> using JuMP,GLPK
julia> using Printf
julia> using LinearAlgebra
```
