

JuMP

version 1.30.0 and more

What is JuMP?

An Algebraic Modeling Language (AML) among the existing ones . . .

... for mathematical optimization (linear, mixed-integer, conic, semidefinite, nonlinear) written in the Julia language.

Overview of JuMP

- ▶ **User friendliness:** syntax that mimics natural mathematical expressions.
- ▶ **Speed:** similar speeds to special-purpose modeling languages such as AMPL.
- ▶ **Solver independence:** Currently 56 solvers are supported.
Among the (M)LP solvers: GLPK, Cbc, Clp, HiGHS, SCIP, CPLEX, Gurobi, FICO Xpress, COPT...
- ▶ **Ease of embedding:** JuMP itself is written purely in Julia.
Solvers are the only binary dependencies.
